2.	INSTALLATION	.3
3.	CONFIGURATION	.4
4.	REPORT VIEW	.5
5.	VIRTUAL INTERFACE	10

1. General Information

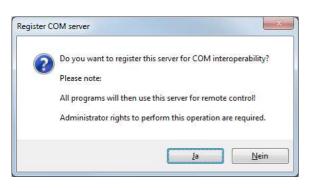

The LabelPrinter tool monitor is used as interface between the MCD TestManager CE and a Windows printer that should be used for printing labels, charts, and simple logs or similar.

2. Installation

For installation, copy the LabelPrinter tool monitor into a user-defined directory, start the program once with administrator rights, and register it as COM server. The tool monitor registers with the operating system.

Starting registration as COM server

Confirming registration as COM server

Name of the file executable:

LabelPrinterMonitor.exe

3. Configuration

Using the "Report" menu item under Setup, a user-defined report can be created. To activate this menu item, the number of "Report views" must be created in the Options of the tool monitor. These are independent forms, in which different reports can be designed and created via "FastReport".

To create a new report view, select the "Report" tab under Setup --> Options in the menu bar, and adjust the desired number of forms in the selection box.

	Categories	Report
Setup Events Devices Scri Options	General Logger Script Visualization	Report Number of report forms 3
Register COM server	Report	
	Report options	QK <u>C</u> ancel

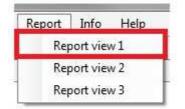

In the image below, three forms were created. After creation, the additional "Reports" option appears in the menu bar. Here, it can be selected between the created forms

Report	Info	Help
Rep	oort viev	w1
Rep	oort viev	w 2
Rep	ort viev	<i>N</i> 3

4. Report view

There are several functions on the report interface for loading, saving, printing, and editing reports. These functions are described in the following.

To open a report view, the desired form is selected under the "Report" menu item.

After the created report view was opened as shown above, an empty interface appears with the menu bar shown below. Four buttons are available at the top of the menu. Refresh Load report, Designer, and Export.

The report preview can be refreshed via the Refresh button. For example, if a time is displayed or a change was made in Designer, it can be refreshed here. For this purpose, Designer must be exited. Otherwise, an error message appears at the bottom of the screen.

Refres	h Loa	ad report	Designer E	qoort			
Drucker		Speichern +	🖂 👬 🗖 🖉		4 1	/on 1 🕨	Schliessen

An already available report can be loaded via the Load report button. During this process, Designer must be exited. Otherwise, an error message appears at the bottom of the screen.

The FastReport Designer opens via the Designer button. Using Designer, layouts for new reports can be created as well as existing reports changed and/or edited. A detailed description of Designer and all available components can be found in the FastReport user's manual under:

https://www.fast-report.com/public_download/FRNetUserManual-de.pdf

Using the Export function, the report can be directly exported (see example "Beispielbericht.html" below). If no specific path is indicated, but only the file name, the export is stored in the directory, where the tool monitor can be found.
